

SME Interviews Analysis

A canvas to **map all** information resulting from **user interviews** and to kick-off the insights-making process.

When

Use this to analyse your interview results. Handy when you're in the **initial stage of a project** and you want to make sure you're solving the right problem. **After every user interview**, the note-taker summarises the main points in the canvas.

- **Fill up each interview canvas** with the main questions you asked and the corresponding information you gained. Use **sticky notes** for pieces of information and **circles** for interesting users quotes.

- Add a **tag**, where appropriate, to point out which of the sticky notes refer to a **pain**, a **delight** or a **driver**. This addition will allow you to search through all sticky notes and quickly select all pieces of information relating to a certain category. It will come in especially useful when crafting insights.

PRO 1

Use **different sticky note colours** to find a bird's eye view of the pains, delights and drivers post-its. When, in the next step, you will cluster information to create insights, **different colours** will allow you to **create a heat map** of which topic carries the most pain points, which one generates most experience delights and which one is the strongest driver.

EXAMPLE

EXAMPLE

Let's find the area of the shaded region in the figure below.
